SKILLS

- Web Scraping & Automation:
Web scraping (BeautifulSoup, requests), scripting for server automation.
- Backend Development:
FastAPI, REST API integration & analysis, Telegram bots.
- Application Security:
Identifying and analyzing Web API vulnerabilities.
- GUI Development: Tkinter-based interfaces for Python scripts.
- Core Competencies: Problem-solving, debugging, and efficient coding practices.

LANGUAGES

- Python
- C
- Java
- Flutter(Dart)
- Html , CSS

PROFILE

Detail-oriented Computer Science student with 2+ years of expertise in web scraping and API vulnerability analysis across diverse websites. Skilled in developing automation scripts, Telegram bots, and custom Python GUIs. Hands-on experience with Python frameworks such as FastAPI and libraries for process automation. Strong problem-solving abilities with a passion for building efficient, secure, and scalable solutions.

PROJECTS

ANIBO

Anime app built using customtkinter and fastapi

- Developed a desktop frontend using CustomTkinter, implementing threads and concurrency for smooth and responsive user interactions.
- Designed a FastAPI-based backend integrated with MySQL and a custom data scraper to automate information collection.
- Implemented a REST-compliant architecture ensuring modularity and scalability.
- Incorporated session token management and followed best practices for application security.

POTHOLE REPORTER

A concept idea to find and fill potholes efficiently

- Built a Streamlit-based web application that allows users to capture photos, add geotags, and upload them to the platform.
- Integrated interactive mapping to visualize pothole locations in real time.
- Developed a simulation feature to model pothole repairs and estimate the materials required.
- Focused on usability and scalability, enabling efficient data collection and visualization for road maintenance planning.

WEBLOPI

A automation script to notify if a website changes

- Created FastAPI-based monitoring tool to track website changes.
- Script runs 24/7 on Raspberry Pi for continuous monitoring.
- Sends push notifications on detected updates.
